Delivered insights via KPI dashboards, ad-hoc reporting, and executive presentations

Solved business case studies using structured, MECE-based frameworks and hypothesis-driven analysis.

INTRODUCTION

Situation

Quick Bite Express, a Bengaluru-based food-tech startup, had established steady growth by connecting customers with local restaurants and cloud kitchens. In June 2025, the company faced operational stress during peak monsoon season.

Complication

Food safety violations at partner restaurants and a week-long delivery outage triggered viral social media backlash. This led to rapid customer churn, declining orders, loss of restaurant partners, falling satisfaction scores, and rising customer acquisition costs, while competitors aggressively captured market share..

Resolution

A data-driven turnaround strategy was implemented to identify recoverable customer segments, fix delivery and food safety gaps, rebuild trust through targeted campaigns, strengthen high-value restaurant partnerships, and monitor recovery using core performance metrics.

01 Compare total orders across pre-crisis (Jan–May 2025) vs crisis (Jun–Sep 2025). How severe is the decline?

Total orders declined by approximately 60–65% from May to June, falling from around 23–24K to about 9K, indicating a sharp mid-year drop in demand.

Limit to 2000 rows

02

Which top 5 city groups experienced the highest percentage decline in orders during the crisis period compared to the pre-crisis period?

Pre Crisis Change

During Crisis Change

While pre-crisis order declines were marginal (~27% cumulative), the crisis triggered a severe ~316% cumulative drop, with all major cities experiencing a sharp and simultaneous demand collapse.

Among restaurants with at least 50 pre-crisis orders, which top 10 high-volume restaurants experienced the largest percentage decline in order counts during the crisis period?

The top 10 restaurants experienced a **consistent and steep order decline during the crisis**, with volumes dropping from ~37–30 pre-crisis to significantly lower levels, indicating widespread demand contraction rather than isolated underperformance.

04 What is the cancellation rate trend pre-crisis vs crisis, and which cities are most affected?

Cancellation rates nearly doubled during the crisis (6.05% → 11.94%), with a sharp mid-year spike, signalling a significant decline in customer reliability that requires immediate corrective action.

08 Estimate revenue loss from pre-crisis vs crisis (based on subtotal, discount, and delivery fee).

Time_Duration	Sum of Subtotal_Amount	Sum of Discount_Amount	Sum of Delivery_Fee
Precrisis	3,63,38,591.00	21,90,305.00	34,72,678.00
Difference (Precrisis-Crisis)	2,57,83,390.00	15,62,626.00	24,60,049.00
Crisis_Period	1,05,55,201.00	6,27,679.00	10,12,629.00
Percentage_Difference	-70.95	-71.34	-70.84

During the crisis period, revenue, discounts, and delivery fee collections declined by ~70% versus pre-crisis levels, indicating a severe demand and monetization shock rather than a pricing or fee-led issue.

Chennai	44	45	45	44	43	44	44	44
Delhi	45	45	44	45	44	44	44	45
Hyderabad	44	44	45	44	45	44	44	44
Kolkata	45	44	44	44	44	45	44	44
Mumbai	45	45	44	44	44	44	44	45
Pune	44	44	45	44	44	45	45	44
Total	355	356	355	354	353	354	354	355

Order frequency dipped sharply in August despite stable ratings, indicating demand sensitivity driven more by operational or external factors than customer satisfaction.

EXECUTIVE SUMMARY

0-90 DAYS

Rebuild Trust & Economics

- Smarter incentives
- Reward reliability
- Improve partner retention

09-18 MONTHS

Stabilize the Core

- Fix delivery delays
- Reduce cancellations
- Win back valuable customers

Redesign for Resilience

- Go hyperlocal
- Use data proactively
- Reduce ad dependence

03-09 MONTHS

POINT 01

*Fix Delivery Speed Gap
(Primary Driver)*

POINT 02

*Reduce Cancellation Rate
Through Reliability*

POINT 03

*Strengthen Supply Side
(Partner Density)*

POINT 04

*Recover Demand via
Experience-Led Retention
(Not Discounts).*

**KEY
POINTS**

**“DATA IS A COMPANY’S MOST STRATEGIC
ASSET IN THE AGE OF AI, AND LEVERAGING
IT EFFECTIVELY IS CRUCIAL FOR
COMPETITIVE AND DECISION – MAKING”**

SATYA NADELLA,

CEO of Microsoft
